## SheerWeave 4000 / 4100 / 4400 with Dow Ecolibrium

As the only sun control fabrics in the market to use DOW's unique ECOLIBRIUM bio-based plasticizer, Styles 4000/4100 and 4400 combine the durability of vinyl coated polyester with the latest in green PVC technology. ECOLIBRIUM is a renewable alternative to traditional plasticizers that lowers greenhouse gas emissions as much as 40% vs existing PVC compounds. Style 4000/4100/4400 with DOW ECOLIBRIUM is phthalate-free, lead-free and RoHS compliant. These fabrics maintain all of the established benefits of traditional vinyl such as durability, clean ability and fabric longevity. Styles 4000/4100 and 4400 may also be used in exterior shading systems.
